(54) Title: INORGANIC POWDER, RESIN COMPOSITION FILLED WITH THE POWDER AND USE THEREOF

(57) Abstract: The present invention relates to an inorganic powder having a frequency-size distribution with multiple peaks, wherein the peaks are present at least in the particle size regions from 0.2 to 2 μm and from 2 to 63 μm , preferably with the maximum particle size being 63 μm or less, the average particle size being from 4 to 30 μm , and the mode size being from 2 to 35 μm . The inorganic powder of the present invention is useful as a filler for a high thermally conductive member in electronic component-mounted circuit board required to have electrical insulating property and heat radiating performance, in that a heat radiating member comprising the powder can have thermal conductivity, the powder can provide a resin composition having excellent withstand voltage characteristics for forming an insulative composition into a thin film and can be filled in the resin composition at a high density so as to improve heat radiating performance of the resin composition.
